

Binary Search Tree

Last Updated : 14 Feb, 2020

Recent Articles on Binary Search Tree !

Binary Search Tree is a node-based binary tree data structure which has the following properties:

- The left subtree of a node contains only nodes with keys lesser than the node's key.
- The right subtree of a node contains only nodes with keys greater than the node's key.
- The left and right subtree each must also be a binary search tree.

Construction and Conversion :

1. Construct BST from given preorder traversal | Set 1
2. Construct BST from given preorder traversal | Set 2
3. Binary Tree to Binary Search Tree Conversion
4. Sorted Linked List to Balanced BST
5. Sorted Array to Balanced BST
6. Transform a BST to greater sum tree
7. Construct all possible BSTs for keys 1 to N
8. Convert a BST to a Binary Tree such that sum of all greater keys is added to every key
9. BST to a Tree with sum of all smaller keys
10. In-place Convert BST into a Min-Heap
11. Convert BST to Min Heap
12. Construct BST from its given level order traversal
13. Reverse a path in BST using queue
14. Binary Tree to Binary Search Tree Conversion using STL set
15. Check given array of size n can represent BST of n levels or not
16. Convert a normal BST to Balanced BST
17. Merge Two Balanced Binary Search Trees
18. Merge two BSTs with limited extra space

Checking and Searching :

1. Find the node with minimum value in a Binary Search Tree
2. Check if the given array can represent Level Order Traversal of Binary Search Tree
3. Check if a given array can represent Preorder Traversal of Binary Search Tree
4. Lowest Common Ancestor in a Binary Search Tree
5. A program to check if a binary tree is BST or not
6. Find k-th smallest element in BST (Order Statistics in BST)
7. Check if each internal node of a BST has exactly one child
8. Check for Identical BSTs without building the trees
9. K'th Largest Element in BST when modification to BST is not allowed
10. K'th Largest element in BST using constant extra space
11. Second largest element in BST
12. K'th smallest element in BST using O(1) Extra Space
13. Check if given sorted sub-sequence exists in binary search tree

Got It !

16. Check if two BSTs contain same set of elements
17. Largest number in BST which is less than or equal to N
18. Maximum Unique Element in every subarray of size K
19. Iterative searching in Binary Search Tree
20. Find distance between two nodes of a Binary Search Tree
21. Count pairs from two BSTs whose sum is equal to a given value x
22. Find median of BST in $O(n)$ time and $O(1)$ space
23. Largest BST in a Binary Tree | Set 2
24. Remove BST keys outside the given range
25. Print BST keys in the given range
26. Print BST keys in given Range | $O(1)$ Space
27. Count BST nodes that lie in a given range
28. Count BST subtrees that lie in given range
29. Remove all leaf nodes from the binary search tree
30. Sum of k smallest elements in BST
31. Inorder Successor in Binary Search Tree
32. Inorder predecessor and successor for a given key in BST
33. Inorder predecessor and successor for a given key in BST | Iterative Approach
34. Find if there is a triplet in a Balanced BST that adds to zero
35. Find a pair with given sum in a Balanced BST
36. Find a pair with given sum in BST
37. Maximum element between two nodes of BST
38. Find pairs with given sum such that pair elements lie in different BSTs
39. Find the closest element in Binary Search Tree
40. Find the largest BST subtree in a given Binary Tree
41. Replace every element with the least greater element on its right
42. Add all greater values to every node in a given BST

Red Black Tree and Threaded Binary Tree :

1. C Program for Red Black Tree Insertion
2. Left Leaning Red Black Tree (Insertion)
3. Threaded Binary Tree
4. Threaded Binary Tree | Insertion
5. Threaded Binary Search Tree | Deletion
6. Convert a Binary Tree to Threaded binary tree | Set 1 (Using Queue)
7. Convert a Binary Tree to Threaded binary tree | Set 2 (Efficient)
